Introductions

- **Katie Zimmerman, Ph.D., BCBA-D**
 - Assistant Professor at KU
 - Prek-2nd grade sped teacher
- **Kelsey Smith, M.Ed., BCBA**
 - Doctoral Student at KU
 - K-4th sped teacher
- **Betsie J. Malone, M.Ed., BCBA**
 - Doctoral Student at KU
 - Clinical director of ABA services at multi-disciplinary pediatric therapy company

4

Acknowledgement of Support and Expertise

- Kathleen Lynne Lane, Ph.D., BCBA-D, CF-L2
- Lee Kern, Ph.D.
- Brandi Simonsen, Ph.D.
- Kelly J. Davis, M.Ed., NBCT
- Heather D. Kolovos, M.Ed.

Introductions

6

Goals for Today

Explore elementary educator opinions on effective and feasible behavioral interventions to improve the engagement of students with behavioral support needs.

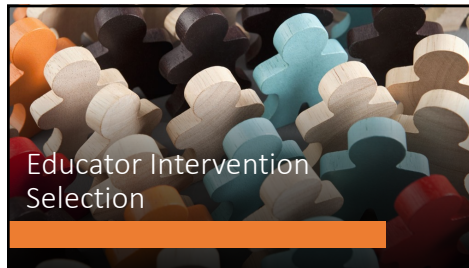

Analyze how educators select behavioral interventions to improve the engagement of students with behavioral support needs.

Discuss how we can coach and support educators to select and implement effective and feasible behavioral interventions.

7

Educator Intervention Selection

8

Educator Intervention Selection

General education teachers almost exclusively are the implementers of strategies designed to support students with or-at risk for EBD (Walker et al., 2014)

General educators report limited familiarity with and understanding of behavioral interventions (Stormont et al., 2011a; 2011b)

When general educators do select interventions, they select based on familiarity, rather than effectiveness data (Gabel et al., 2014)

9

Research Questions

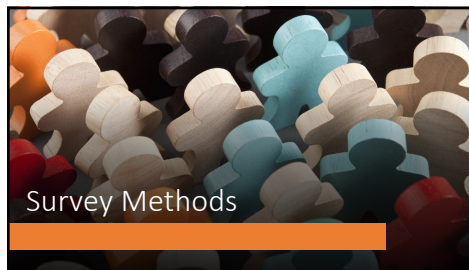

How do elementary educators perceive the relation between engagement and challenging behavior?

Do elementary educators prefer interventions designed to prevent or respond to challenging behavior?

What behavioral interventions to elementary educators identify as effective and feasible for implementation in their classrooms?

Where do elementary educators find behavioral interventions designed to improve engagement for elementary students exhibiting challenging behavior?

10

Survey Methods

11

Sampling and Development

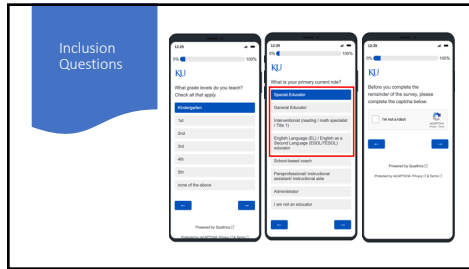

Qualtrics Panel of Educators

Test Panel: 50 responses

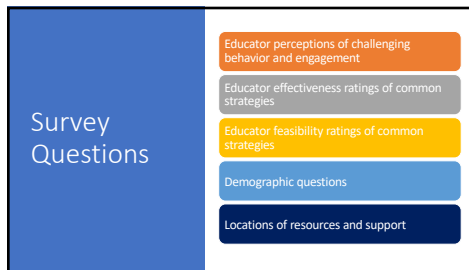

Cognitive Interviews

- Elementary general educators (kindergarten, first grade educator)
- Elementary instructional coach
- Elementary-focused behavior analysts
- Experts in tiered systems of support

28

29

30

Educators believe that all staff should know interventions that can increase student engagement

How can we build systems of coaching and support for all staff members (general educators, paraprofessionals, related arts teachers, etc.)?

31

Educator Effectiveness and Feasibility Ratings

32

Effectiveness Survey Questions

	Effective	Ineffective	Unsure
Precorrection/Setting Expectations. Defining expected behaviors for a specific activity or routine before children do it. This reminder may include behaviors about using materials, interacting with others, voice volume, or activities for completion during an activity/routine. This occurs every time the activity/routine happens in the classroom to either the whole group, a few, or an individual.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

33

Feasibility Survey Questions

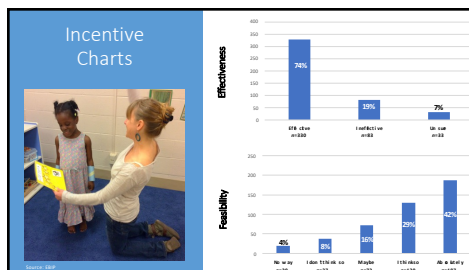

Preassessment/Setting Expectations. Clarifying expected behaviors for a specific activity or routine before children do it. This reminder may include behaviors about using materials, interacting with others, voice volume, or activities for completion during an activity/routine. This occurs every time the activity/instructor happens in the classroom to either the whole group, a line, or an individual.

- No way – It's too much
- I don't think so – It seems difficult
- Maybe – I'm not sure
- I think so – It's a good idea
- Absolutely – I do it now or definitely could

38

39

40

41

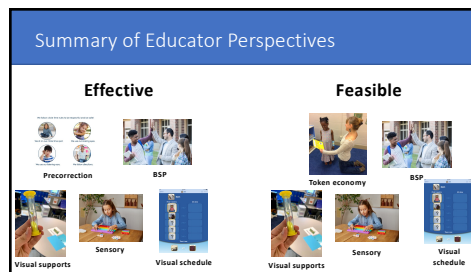

42

43

44

45

Educators are noting both evidence-based and non-evidence-based strategies as effective and feasible.

When consulting, how do we validate educator proactivity in suggesting strategies?

46

Educators rate most strategies as highly effective and highly feasible.

How do we accurately capture educator perceptions and practices when coaching and consulting?

47

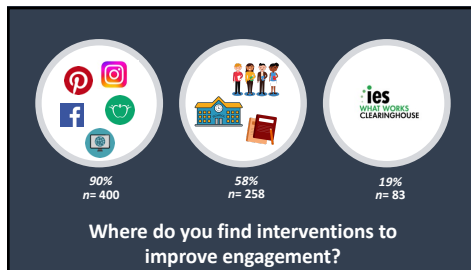

Emergency certification did not significantly change effectiveness or feasibility ratings

How can we adapt our in-service PD, coaching, or consultation to support educator knowledge about effective low-effort practices to support student engagement?

48

49

50

51

Educators continue to heavily rely on popular media, educator blogs, and other educators

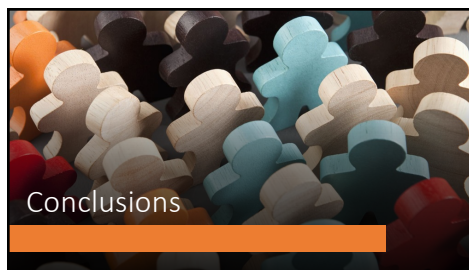

How can we support educators to assess the quality of information found on popular social media and educator blogs?

52

Educators continue to heavily rely on one another, and educators in the same building go to one another for strategies and support.

How can we leverage these communities, and use other teachers to disseminate information about behavioral interventions?

53

Conclusions

54

Three main takeaways for coaches:

We need to disseminate information in easily accessible ways

Educators trust one another for strategies and support

Knowledge and beliefs alone are not enough to change practice

55

We can not be the primary funds of knowledge for behavioral strategies in schools

56

DISCUSSION
